TECHNET GLOBAL SERVICES DEPLOYS ODYSSEY REMOTE EYES® INTEGRATION INTO IP ACCESS CONTROL SYSTEM

Victor, New York - TechNet Global Services, a company that provides, installs and services a variety of networks and technologies, announced today the integration and deployment of Odyssey's Remote Eyes Advanced Application Integration software with a panel-free IP Access Control System throughout their Victor, NY location. All building and warehouse ingress/egress access control points have been integrated with the Odyssey software which connects directly to the TechNet IP network.

Remote Eyes uses Internet Protocol (IP) network technology to leapfrog the serial data integration products commonly used in the industry. Remote Eyes uses a LAN connection to link with the TechNet IP-based access control system to record and capture events. TechNet Global Services' decision rested not only on the substantial savings on equipment and installation costs but also on the features and benefits. The Odyssey product offers a pure IP, real-time data collection solution and works with both wired and wireless based access control readers. With software integration, each event and transaction is faithfully transmitted to the security system.

"Having the ability to see and record every event is a huge benefit" said Jerry **Fischette, CEO of TechNet Global Services**. "With software integration, not only can every event be recorded but can also be searched and retrieved with a single click. And video events can also be burned to a CD or DVD."

Fischette added, "The Odyssey solution was easy to install, configure, and integrate into our access control system. I would recommend this solution to any entity where viewing and recording video events is crucial."

About TechNet Global Services

Founded in 1993 by CEO Jerry Fischette, TechNet Global Services is nationally recognized as an industry leading high-tech solutions integrator. With an unparalleled standard of excellence, TechNet Global Services has a history of quality and expertise in the delivery and implementation of technology. From design, to installation, to service and maintenance, TechNet Global Services offers complete technology solutions, including satellite, wireless, telecom, security/surveillance, access control and A/V to an increasingly diverse clientele. With a long list of experienced partners, access to the most innovative, cutting-edge technology and a highly qualified team of professionals, TechNet Global Services continues to lead the industry in technology solutions, full service integration and implementation while maintaining a strong commitment to customer service.
